

Category	Issue	Key to Success
Leadership	Effective communication	Clear, concise, and consistent communication across all levels of the organization
People	Empowerment and motivation	Providing training, resources, and support to enable employees to perform at their best
Strategy	Clear vision and mission	Establishing a clear vision and mission statement that guides all business decisions
Structure	Organizational design	Designing an organizational structure that supports the business strategy and facilitates communication
Systems	Information systems	Implementing and maintaining effective information systems to support business operations
Financial	Financial management	Managing financial resources effectively to ensure the organization's financial health
Legal	Legal compliance	Ensuring that the organization complies with all applicable laws and regulations
Technology	Technology adoption	Adopting and integrating new technologies to improve business efficiency and effectiveness
Environment	Environmental impact	Minimizing the organization's environmental footprint and promoting sustainability
Community	Community engagement	Engaging with the local community and promoting social responsibility
Global	Global expansion	Expanding the organization's reach into new markets and cultures
Future	Future planning	Developing a clear vision and strategy for the future of the organization

- **How are life insurance policies that change based on the person's age?**
- **What is the premium for child death and income after the term expires?**
- **How does the policyholder's death benefit change when the term expires?**
- **What happens when the term expires and the policyholder is still alive?**
- **What happens when the term expires and the policyholder is still alive?**
- **How does the policyholder's death benefit change when the term expires?**
- **What happens when the term expires and the policyholder is still alive?**
- **What happens when the term expires and the policyholder is still alive?**

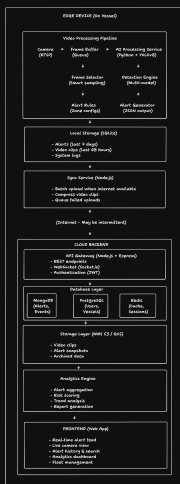

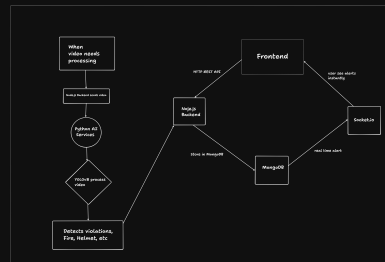

[illegible][illegible]

- KILL IMMEDIATELY:** Option 6 "Cloud-Based Processing [No Edge]"
- **The Idea:** Stream video to the cloud and run AI there to save Eds on Edge hardware.
 - **Why it Fails:** Inefficiency, Data Costs.
 - **The Math:** NVIDIA VPU data costs \$2 - \$100 per GB depending on the plan.
 - **Scenario 1:** Example at 1080p (6,000 FPS) - 1080p/1080p
 Fully Cost: ~\$100 US (estimated) per camera.
 Monthly Cost: \$3,000 per camera.
 - **Result:** You will bankrupt the client if you do it. AI must run on the Edge (NVIDIA).

- NVIDIA ECC: Option 3 "Use Existing Only Computer"**
- The ECU: Installed your AE software on the PC already on the ship's bridge.
 - Engineering Note:**
 - Regulatory ECC2 (Random Card Timing) and ECC2C options are strictly regulated. Installing third party systems (such as) on existing computers is often illegal or violates carrier rules (NVIDIA).
 - Performance:** There are no on-board main (NVIDIA) or on-board (NVIDIA) They cannot run computer chips (NVIDIA) or acceptable frequencies.
 - Warranty:** Only valid if they have a dedicated non-critical core PC with a standard GPU (highly unlikely).

- The Idea: the expensive (US\$2k) camera only for exposed decks; use standard flashlights/cheap \$169 camera for interiors.
- Savings Potential:
 - Total Camera: \$5
 - Original Item: \$200 = \$195
 - Hybrid Item: 4 x \$250 (Deck) = \$1k x \$15k (Interior) = \$2.4k = \$1.9k = \$500
 - Total Savings: \$500 Savings per ship.
- This simple change saves your "Standard" Bar price down to your "Budget" Bar price.

- **Pre-determined market clearing prices** (official Line Items). You must add them to avoid losing margin.
- 1. **Transactional Taxes & Legistics**
 - **Ship**: are rarely in your home port, they pay for the **Incubator's Right to Engage** (which is added to the bill)
 - **Incubator**: pay for the **Legistics & Dematerialization Fee (SDI/Incubator)**
- 2. **On-board Power Kits**
 - If the **ACU** power supply dies in the middle of the **Incubator**, the system is dead for 7 months.
 - **Incubator** add a **Virtual Power Kit (VPS)** (300 \$/VPS). It's **Power Kit**, to **Power Power Supply** (the **Protonium** Team).
- 3. **Software Licensing / VMS**
 - If you're using a **Tool** (like **McKinsey**) or a **paid one (Salesforce/Zendesk)**
 - If running **online AS**, you need an **AS maintenance fee**. **Incubator** negotiates on **Belgium** (fix-top-fee) and **crash** eventually. You need a **systems management agent cost** (e.g. **Interra** or **Apogee** for **AS**).
